BRYANSKSPIRTPROM
DISTILLERY SINCE 1899

Spirits warehouse

The distillery is using rectified ethyl alcohol “Lux”.

To obtain alcohol the distillery uses wheat that has been grown in soil-climatic conditions of Russia.

There 4 unique tanks in the spirits warehouse each of

120000 litres volume.

They are made according to 19th century technologies and have been used since the foundation of the distillery.

BRYANSKSPIRTPROM
DISTILLERY SINCE 1899

Water processing

Specially processed artesian water is used in the production. Water has been used from a well equipped to exploit the Upper-French-Famennian terrigenous-carbonate formation.

The water undergoes a set of unique technological operations on a membranous assembly «MCB - 5,5» that consists of a water preliminary processing unit and a reverse osmosis plant.

BRYANSKSPIRTPROM
DISTILLERY SINCE 1899

Vodkas processing shop

Processing of a water-alcohol solution through coal filtration batteries is used to make vodkas in a classic way. Filtration material in coal columns is a birch coal of БАУ sort, produced of specially selected kinds of birch. Filtration is realized by gravity only, speed and temperature

of the filtration are controlled automatically and total 30-40 decalitres per hour, under 16-18° C. The special aroma and taste of Russkaya vodka are formed by adsorption and oxidative restoring processes that happen on a surface and in pores of the coal.

BRYANSKSPIRTPROM

DISTILLERY SINCE 1899

Liqueurs shop

The shop is equipped with all the necessary equipment to produce high quality spirits. Own production of semi-finished products, aging in oak barrels and processing of finished blends with cold under -15°C allow to increase many times the spirits durability to transportation and keeping.

BRYANSK SPIRIT PROM
DISTILLERY SINCE 1899

Bottling shops

There are 5 bottling lines of the German company “Krones” of **6000** bottles per hour capacity and 1 souvenir bottling line. This equipment is capable of production to bottles of capacities from 0,04l to 3,0l, of any configuration, with labels and corking materials of any complexity.

BRYANSKSPIRITPROM
DISTILLERY SINCE 1899

Laboratory

The laboratory had been accredited by the State and has an arbitral status. It is equipped with modern analytical equipment.

6 specially trained experts-tasters control organoleptic qualities of the finished products.
